## Finnish expertise in cable manufacturing

Nestor Cables is a Finnish highly appreciated cable manufacturer whose innovative solutions are relied on by several global companies around the world. Nestor Cables develops and manufactures optical and copper telecommunication cables together with fibre optic cable accessories.

In addition to an extremely strong market position in Finland, our main market areas are Russia, Kazakhstan, Ukraine, the Baltic states, Northern Europe, the Balkans, the USA, Central America, the Middle East and Africa.

## Our technology

The Nestor Cables factory in Oulu started its production in 2008 and has continued to be one of Europe's most modern production facilities in its size category. The processes and equipment are designed for our operations and products, which means cost efficiency, flexibility and fast reaction times to our customers.

## www.nestorcables.com

To learn more about our products and company, or to read news and announcements about our recent projects and presence in industry events, please visit our website.

Nestor Cables' operations began ten years ago in 2007, but our employees have decades of extensive and long-standing experience in the Finnish cable industry.

Our strong research and development unit continuously improves existing products and creates new solutions to meet tomorrow's demands. Various pilot and development projects all around the world help maintain our company know-how.

## **Our products**

Nestor Cables' range of optical fibre cables offers dependable solutions for various installation conditions and special requirements. All our products are developed in close cooperation with customers.

Besides cables Nestor Cables' product range includes also installation accessories and even whole customized special solutions to cater the needs of our customers.

## **International standards**

Our management system is certified according to ISO 9001, ISO 14001 and OHSAS 18001 standards. Our quality assurance and testing facilities for all necessary routine and type tests are according to the international standards.

### ISO 9001 Quality

We are able to carry out all necessary routine and conformance testing, including fiber tensile strength tests and elongation measurements, as well as various low-temperature tests down to -60°C.

### ISO 14001 Environment

Our modern equipment has low energy and water consumption during the entire production process and our efficient use of raw materials saves natural resources.

### **OHSAS 18001 Health and Safety**

Our processes are constantly monitored and developed to assure a healthy and safe workplace for all of our employees.

Nestor Cables Ltd. is a signatory of the Industry Charter of Europacable. Signatories of the Charter are committed to continuous achievement in:

- Product compliance and innovation
- Business ethics and social responsibility
- · Health and Safety
- · Environment and climate change

**Europacable** Try life without us

## **Direct buried cables**

Direct buried cables are buried under the ground without separate coverings, and therefore they might face extreme conditions, for example changing temperatures and moisture. Installation environment dictates the needed level of protection in these cables.

Nestor Cables range of cables includes a wide selection of durable direct buried cables to challenging installation conditions: from classic cables with central tube or stranded loose tube construction to new innovative fibre optic cables with flexible construction.

Nestor Cables can supply cables with a variety of fibre types and counts, and we have decided to present only a fraction of our growing product range in this brochure. However, we will modify and develop our products to fit your special requirements upon request.

### What are flex cables?

Newly developed flexible tube cable has a special construction and several clear benefits compared to the traditional optical fibre cable, and we are one of the few cable manufacturers able to produce flexible tube optical fibre cables.

Higher packing density of fibres in flexible tube optical cables results in significantly smaller cables. Flexible construction has also features which make installing significantly easier.

## nest

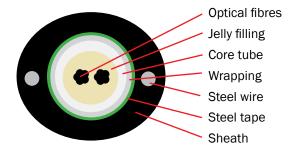

## FYOVD2PMU

The most durable cable at the market for direct buried installation

**Classic direct buried cable** 

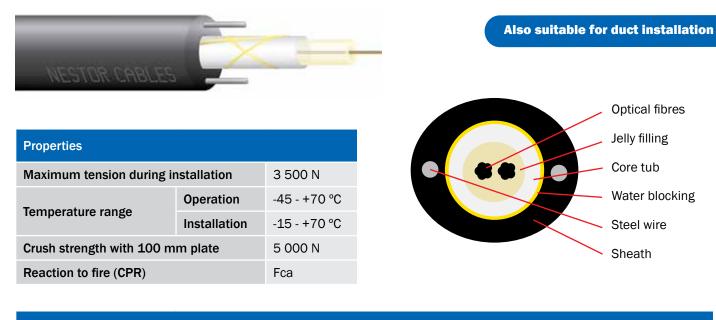

Properties				
Maximum tension during installation 5 000 N				
Temperature range	Operation	-45 - +70 °C		
Temperature range	Installation	-15 - +70 °C		
Crush strength with 100 mm plate		8 000 N		
Reaction to fire (CPR)	Fca			

Construction	
Optical fibres	Coloured single-mode fibres according to the ITU-T G.652.D standard. Also available with multimode fibres.
Secondary coating	A plastic core tube with jelly filling.
Wrapping	The cable core is wrapped longitudinally with a swellable tape.
Protection	Polymer coated corrugated steel tape applied longitudinally with an overlap. The nominal thickness of the steel tape is 0,15 mm.
Strength members	Two 1,6 mm diameter steel wires in the sheath.
Outer sheath	UV resistant black PE. Nominal sheath thickness is 2,5 mm.
Sheath marking	Marking printed on the sheath at one meter interval: Nestor Cables - cable type - lot number - year of manufacture - length marking.

16x12xSML	13,4	127	260	130	6 000	K20

## **Duct cables**

Fibre optic cables must be rigid yet flexible enough to be installed into duct systems. Our range of cables includes many options for duct installation, and there are for example cables suitable for installation by pulling or blowing. Our duct cables are robust and developed to withstand special conditions of each installation method.

Our product range varies from traditional central and stranded loose tube constructions to newly developed flexible tube constructions. Many of these constructions are non-metallic.

Nestor Cables manufactures fibre optic cables for microduct installations too.

Nestor Cables can supply cables with a variety of fibre types and counts, and we have decided to present only a fraction of our growing product range in this brochure. However, we will modify and develop our products to fit your special requirements upon request.

## Cable drum Blowing equipment equipment Cable moves forward in pipe Cable moves forward in pipe Manhole or handhole

### Installation of duct cable by air blowing

This illustration explains installation of cable into the duct system or into the underground pipe by air blowing. No pulling equipment or pulling rope is needed, and the pulling force is distributed evenly along the whole cable length. Advantage of the blowing technique is also the fact that the cable can be blown into an existing pipe during any season.

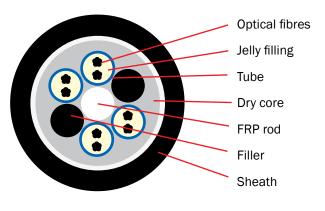

## FZOMU-SD

Non-metallic optical fibre cable for duct installation either by pulling or blowing

Non-metallic optical fibre cable

Properties					
Maximum tension	12 - 48 fibres	1 500 N			
during installation	96 - 192 fibres	3 500 N

## **Microduct cables**

Installing telecommunication and access network cabling in metropolitan and suburban areas can be demanding. In these areas space is limited and cabling should be done underground or on existing infrastructure. These limitations can be overcome by using microduct cables. Microcabling system is built directly to the ground or on duct routes.

Microcabling system allows flexible expansion of the network. After microducts are installed, microduct cables can be easily blown in microducts whether building a new network or expanding existing network. By using microduct technology CAPEX and OPEX can be significantly reduced.

Nestor Cables can supply cables with a variety of fibre types and counts, and we have decided to present only a fraction of our growing product range in this brochure. However, we will modify and develop our products to fit your special requirements upon request.

## **High fibre density**

High fibre density of low weight microduct cables combined with ease of handling these cables, increased jetting speeds and improved duct and space utilization result in reduced costs.

## **FZOMU-SD** Micro

Optical fibre cable for microduct installation by blowing

## FYORMU Micro 2,5 mm

Optical fibre cable with 2-12 fibres for microduct installation by blowing

Construction	
Optical fibres	Coloured single-mode fibres according to the ITU-T G.657.A1
Secondary coating	A plastic core tube with jelly filling.
Strength members	Aramide yarns under the sheath.
Outer sheath	UV resistant black thermoplastic compound. Nominal sheath thickness is 0,3 mm.
Sheath marking	Marking printed on the sheath at one meter interval: Nestor Cables - Cable type - lot number - year of manufacture - length marking.

Cable size Diameter		Weight	Minimum bending radius mm		Length	Drum
Cable Size	mm	kg/km	During installation	Installed	m	Drum
2xSML	2,5	5	50	25	4 000	P7
4xSML	2,5	5	50	25	4 000	P7
8xSML	2,5	5	50	25	4 000	P7
12xSML	2,5	5	50	25	4 000	P7

## **Aerial cables**

All-dielectric self-supporting cables (ADSS) are non-metallic so they are free from lightning and overvoltage problems when used along electrical power lines. They are designed to be lightweigh but also strong enough to be installed between support towers. The cables must also withstand strain of the natural elements, for example wind and ice.

Nestor Cables' product range includes a variety of all-dielectric self-supporting cables. ADSS 3 kN FYORMU and ADSS 3 kN FZORMU-SD are meant for short span power lines whereas ADSS 8 kN FZOMRMU-SD is suitable for longer span (even 150 metres) power lines.

We can also manufacture fibre optic cables with suspension wire. For example classic FYOHBMUK with self-supporting figure-8 construction has a maximum span length of 60 metres.

Nestor Cables can supply cables with a variety of fibre types and counts, and we have decided to present only a fraction of our growing product range in this brochure. However, we will modify and develop our products to fit your special requirements upon request.

## Installation of ADSS cables

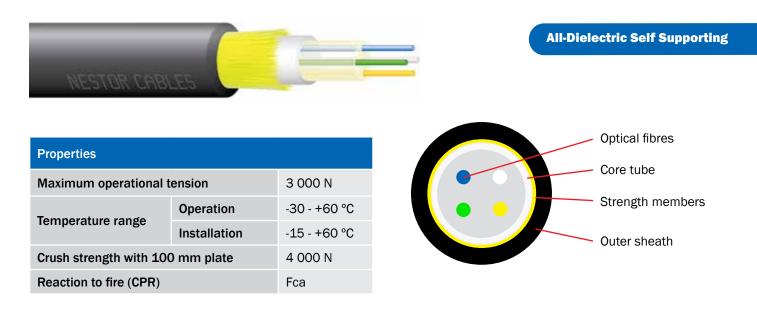

ADSS cables are installed to poles by using hangers which are designed especially for this use. Installation height must be determined according to local standards and rules for example to avoid interference caused by traffic.

## **ADSS 3kN FYORMU**

Lightweigh optical fibre cable for aerial installation for short span power lines (70 m, NESC heavy)

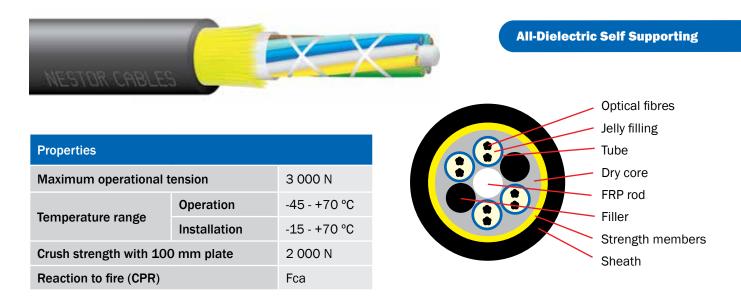

Coloured single-mode fibres according to the ITU-T G.652.D standard.
A plastic core tube with jelly filling.
The cable core is surrounded with water blocking yarns.
A helically stranded layer of high modulus aramide yarns.
A non-metallic rip cord is applied under the sheath.
UV resistant black PE. Nominal sheath thickness is 1,3 mm.
Marking printed on the sheath at one meter interval: Nestor Cables - cable type - lot number - year of manufacture - length marking.

Cable size	Diameter	Weigh	Minimum bending radius mm		Length	Drum
Capie Size	mm	kg/km	During installation	Installed	m	Drum
4xSML	8,5	57	170	85	6 000	K14
6xSML	8,5	57	170	85	6 000	K14
12xSML	8,5	57	170	85	6 000	K14

## **ADSS 3kN FZORMU-SD**

Lightweigh optical fibre cable for aerial installation for short span power lines (70 m, NESC heavy)

Coloured single-mode fibres according to the ITU-T G.652.D.
elly filled loose tubes made of thermoplastic polyester.
Plastic fillers when applicable.
Glass fibre reinforced plastic (FRP).
The secondary coating tubes and fillers (when needed) are SZ-stranded around the central strength member.
Dry water blocking elements are applied to the cable core.
A helically stranded layer of high modulus aramide yarns.
A non-metallic rip cord is applied under the sheath.
JV resistant black polyethylene compound (HDPE). Nominal sheath thickness is 1.5 mm.
Marking printed on the sheath at one meter interval: Nestor Cables - cable type - lot number - rear of manufacture - length marking.

Cable size	Diameter	Weight		ı bending s mm	Length	Drum

All-Dielectric Self Supporting

## **FYOHBMUK**

Classic fibre optic cable with a suspension wire for aerial installation

Optical fibres	Coloured single-mode fibres according to the ITU-T G.652.D standard.
Secondary coating	A plastic core tube with jelly filling.
Wrapping	The cable core is wrapped longitudinally with a swellable tape.
Moisture barrier	Polymer coated aluminium tape applied longitudinally with an overlap. The nominal thickness of the tape is 0,15 mm.
Suspension wire	The suspension wire is made of stranded galvanised steel wires. The nominal diameter is 7x1,57 mm.
Outer sheath	The cable sheath consists of UV resistant black PE. Nominal sheath thickness is 1,4 mm. Nominal neck dimensions: height 3,0 mm, width 2,1 mm.
Sheath marking	Marking printed on the sheath at one meter interval: Nestor Cables - cable type - lot number - year of manufacture - length marking.

Cable size	Diame	ter mm	Weight	Minimum bending radius mm		Length	Drum

2x4x12xSML	12,0	23,0	260	300	150	6 000	K22

## **Indoor – Outdoor cables**

When installing cables to a building, for example in Fibre to the Home applications, safe cables which can be installed both inside and outside the building are needed.

Nestor Cables' product range includes a variety of indoor - outdoor cables. Among more traditional FZOMSU-SD and FZOMSU-SD Mini cables we can also offer FZ2RMSU Flex with a newly developed flexible tube construction.

Nestor Cables can supply cables with a variety of fibre types and counts, and we have decided to present only a fraction of our growing product range in this brochure. However, we will modify and develop our products to fit your special requirements upon request.

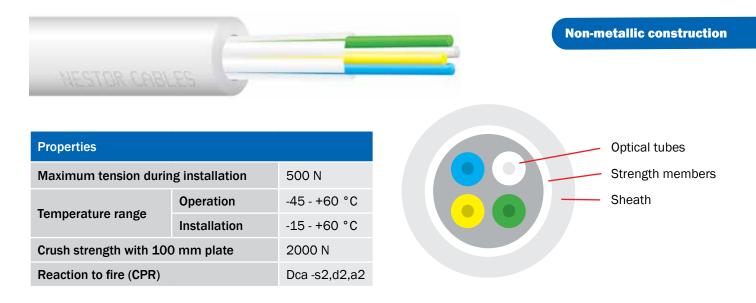

## **Safety first**

In fibre optic cables for indoor - outdoor installation safety is a necessity, and it is important that these cables fullfill certain standards. In our indoor - outdoor cable range you can find fibre optic cables which are halogen-free, flame retardant and low smoke according to international standards.

Nestor Cables' quality assurance and testing facilities for all necessary routine and type tests are according to the international standards.

## **FTMSU**

Non-metallic tight-buffered optical fibre cable for indoor and outdoor FTTX applications (riser, distribution and drop cable)

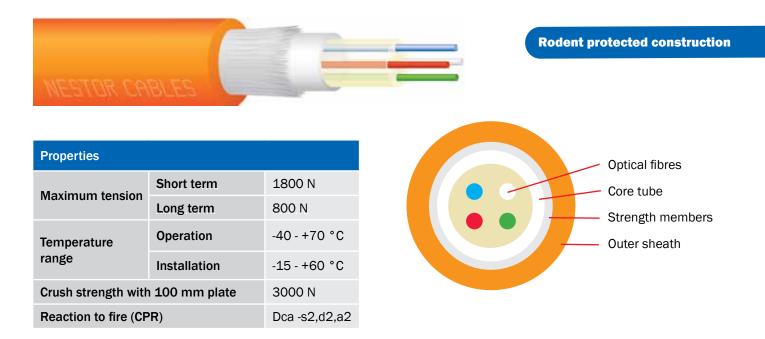

Construction	
Optical fibres	Single-mode fibres according to the ITU-T G.657.A1. Fibres meet also the requirements of ITU-T G.652.D.
Secondary coating	Tight buffer, outer diameter 900 μm
Strength members	Glass yarns with water-blocking coating under the sheath.
Outer sheath	Flame retardant, halogen free and UV resistant plastic (LSZH). Colour of the sheath is light grey RAL 7035. Nominal sheath thickness is 1,0 mm. Cable is flame retardant according to the IEC 60332-1-2 and IEC 60332-3.
Sheath marking	Marking printed on the sheath at one meter interval: Nestor Cables - cable type - lot number - year of manufacture - length marking.

Ochlasier	Diameter	Weight		ı bending s mm	Length	Duum	
Cable size	mm	kg/km	During installation	Installed	m	Drum	
2xG.657.A1	5,3	28	100	50	2 000	P6	
4xG.657.A1	5,3	28	100	50	2 000	P6	
12xG.657.A1	7,2	51	100	50	2 000	P8	
24xG.657.A1	8,3	67	160	80	2 000	P8	

## FYORMSU 1,8 KN

Non-metallic rodent protected optical fibre cable. Suitable for both indoor and outdoor (duct) installation.

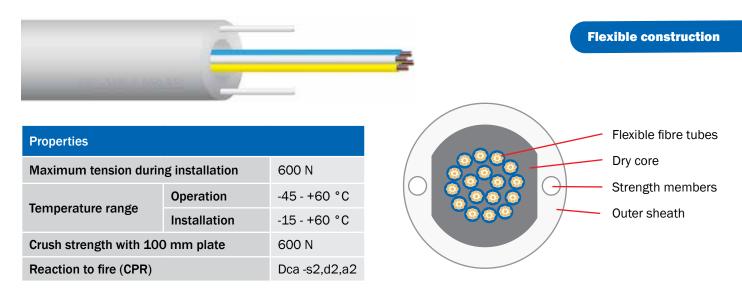

Optical fibres	Coloured single-mode fibres according to the ITU-T G.657.A1				
Secondary coating	A plastic core tube with jelly filling.				
Strength members	Water-blocked E-glass yarns under the sheath.				
Rip cord	A non-metallic rip cord is applied under the sheath.				
	Flame retardant, halogen free and UV resistant plastic (LSZH). Colour of the sheath is orange.Nominal sheath thickness is 1,2 mm. Flame retardant, halogen free and UV resistant plastic (LSZH).				
Outer sheath	Cable fulfills the following standards:				
	<ul> <li>Flame retardant IEC 60332-1-2</li> <li>Low smoke IEC 61034-2</li> <li>Halogen free IEC 60754-2</li> </ul>				
Sheath marking	Marking printed on the sheath at one meter interval: Nestor Cables - cable type - lot number - year of manufacture - length marking.				

Cable size	Diameter	Weight		n bending Is mm Length		Drum
Cable Size	mm	kg/km	During installation	Installed	m	Drum
4xSML	7,0	53	140	70	2 000	P8
8xSML	7,0	53	140	70	2 000	P8

24xSML	7,5	59	150	75	2 000	P8

## **FZ2RMSU Flex**

Lightweight halogen free fiber optic cable based on flexible loose tubes that are easy to handle and strip

Construction	Construction				
Optical fibres	Singlemode fibers according to the standard ITU-T G.652.D or multimode fibers type OM3.				
Secondary coating	Flexible colour coded fiber modules. Fibers are placed in thin tubes made of soft elastomeric material. Colours according to FIN2012. Tubes with OM3 fibers are marked with a red stripe.				
Water blocking	Water blocking yarns in the cable core.				
Strength members	Two glass fiber reinforced plastic rods (FRP) in the sheath. Nominal rod diameter is 1,0 mm.				
Outer sheath	Flame retardant, halogen free and UV resistant plastic (LSZH). Colour of the sheath is light grey. Nominal sheath thickness is 1,5 mm. Cable fulfills the following standards:				
	<ul> <li>Flame retardant IEC 60332-3</li> <li>Low smoke IEC 61034-2</li> <li>Halogen free IEC 60754-2, EN 50267-2-1, EN 50267-2-2</li> </ul>				
Sheath marking	Marking printed on the sheath at one meter interval: Nestor Cables - cable type - lot number - year of manufacture - length marking.				

	Diameter Weight	Weight	Minimum bending radius mm		Length	
Cable size	mm	kg/km	During installation	Installed	m	Drum
1x4xSML	6,0	34	120	60	2 000	P8

## FZOMSU-SD Mini

Lightweigh, halogen free, UV resistant and flame retardant fibre optic cable

Construction	
Optical fibres	Coloured single-mode fibres according to the ITU-T G.652.D.
Secondary coating	Jelly filled loose tubes made of thermoplastic polymer.
Fillers	Plastic fillers when applicable.
Central strength member	Glass fibre reinforced plastic (FRP).
Cable core stranding	The secondary coating tubes and fillers (when needed) are SZ-stranded around the central strength member.
Strength members	A helically stranded layer of fiberglass yarns (waterblocking).
Rip cord	A non-metallic rip cord is applied under the sheath.
Outer sheath	Flame retardant, halogen free and UV resistant plastic (LSZH). Colour of the sheath is black. Cable is flame retardant according to the IEC 60332-1.
Sheath marking	Marking printed on the sheath at one meter interval: Nestor Cables - cable type - lot number - year of manufacture - length marking.

Ochie size	Diameter	Weight	Minimum bending radius mm				Drum
Cable size	mm	kg/km	During installation	Installed	m	Drum

## **Indoor cables**

Indoor cables are used inside the buildings e.g. to connect a subscriber or end-used to the building distributor inside a building for example in multi-dwelling houses or in office buildings.

Nestor Cables can supply cables with a variety of fibre types and counts, and we have decided to present only a fraction of our growing product range in this brochure. However, we will modify and develop our products to fit your special requirements upon request.

## **Complete solution for indoor installations**

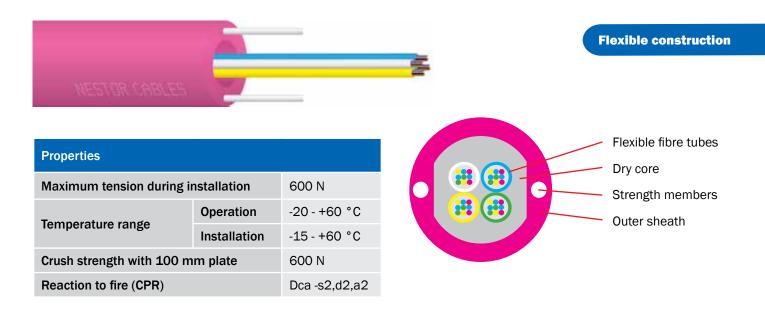

Among our new FZ2RMS FlexD indoor cable, we can supply other needed accessories to create effective indoor cabling solutions. Our range of product include for example termination boxes and cabinets, patch panels, pigtail kits and patch cords.

Visit our website to learn more: www.nestorcables.com

## **FZ2RMS FlexD**

Lightweigh, halogen-free and non-metallic optical fibre cable for indoor applications.

Construction	
Optical fibres	Available fibre types: OS2 single-mode (ITU-T G.652.D), OM3 multi-mode and OM4 multi-mode.
Secondary coating	Flexible colour coded fibre modules. Fibres are housed in thin walled tubes made of soft elastomeric material.
Strength member	Two glass fibre reinforced plastic rods (FRP) in the sheath. Nominal rod diameter is 1,0 mm.
	Flame retardant, halogen free and UV resistant plastic (LSZH). Nominal sheath thickness is 1,5 mm. Colour according to the fibre type: OS2 yellow, OM3 aqua, OM4 heather violet.
Outer sheath	Cable fulfills the following standards: <ul> <li>Flame retardant IEC 60332-3-24</li> </ul>
	<ul> <li>Low smoke IEC 61034-2</li> <li>Halogen free EN 50267-2-1, EN 50267-2-2</li> </ul>
Sheath marking	Marking printed on the sheath at one meter interval: Nestor Cables - cable type - year of manufacture - length marking.

8x12x0M3	8,6	65	180	90	2000	P8
2x12x0M4	6	37	120	60	2000	P8
4x12x0M4	7,6	52	160	80	2000	P8
8x12x0M4	8,6	65	180	90	2000	P8

## Cables for industrial premises

A variety of our most popular cables are available with OM1 or OM3 multimode fibres or as hybrid cables including both single-mode and multimode fibres.

Nestor Cables can supply cables with a variety of fibre types and counts, and we have decided to present only a fraction of our growing product range in this brochure. However, we will modify and develop our products to fit your special requirements upon request.

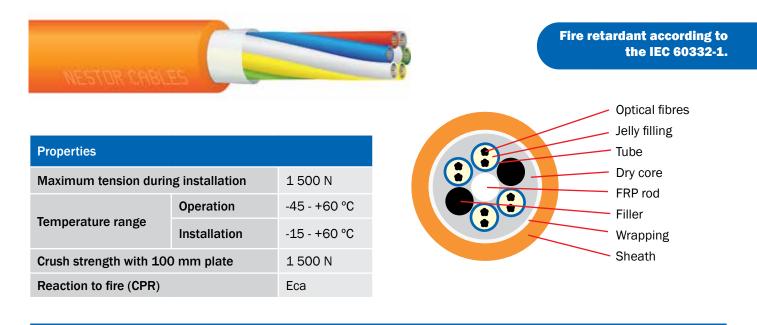

## Alternative use for FTRMSU

In addition to installation for industrial premises, our FTRMSU optical fibre cable can be utilized in mobile fibre optic cable units for security, defence and other temporary applications. For these applications, a full range of accessories is also available. Our selection includes for example:

- short cable assemblies
- carrying frames
- reel stands
- reeling and unreeling equipment
- cleaning kits for the connectors

FZOMSU-SD (OM1)

Halogen free and flame retardant fibre optic cable (LSZH)

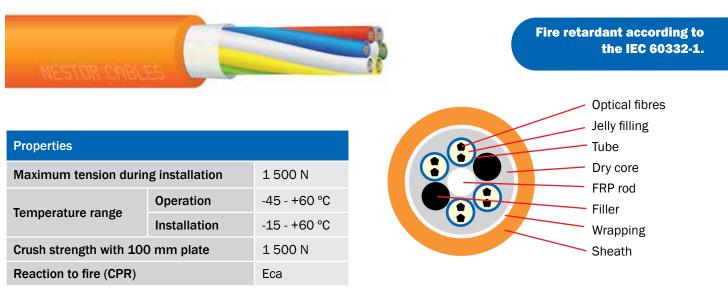

Construction	
Optical fibres	Coloured OM1 multi-mode fibres (GKL, 62,5/125 $\mu m$ ). Single-mode fibres according to the ITU-T G.652.D in hybrid cables.
Secondary coating	Jelly filled loose tubes made of thermoplastic polyester.
Fillers	Black plastic fillers when applicable.
Central strength member	Glass fibre reinforced plastic (FRP).
Cable core stranding	The secondary coating tubes and fillers (when needed) are SZ-stranded around the central strength member.
Wrapping	The cable core is wrapped longitudinally with a water blocking tape.
Rip cord	A non-metallic rip cord is applied under the sheath.
Outer sheath	Flame retardant, halogen free and UV resistant plastic (LSZH). Colour of the sheath is orange. Nominal sheath thickness is 1,4 mm. Cable is flame retardant according to the IEC 60332-1.
Sheath marking	Marking printed on the sheath at one meter interval: Nestor Cables - cable type - lot number - year of manufacture - length marking.

Coble size	Diameter mm	Weight kg∕km	Minimum bending radius mm		Length	Drum

## FYOVD2PMU (OM1)

The most durable cable at the market for direct buried installation

Also available with single-mode fibres and as hybrid cable (SM+MM).

Properties						
Maximum tension during installation 5 000 N						
Temperature range	Operation	-45 - +70 °C				
	Installation	-15 - +70 °C				
Crush strength with 100 mm plate 8 000						
Reaction to fire (CPR)	Fca					

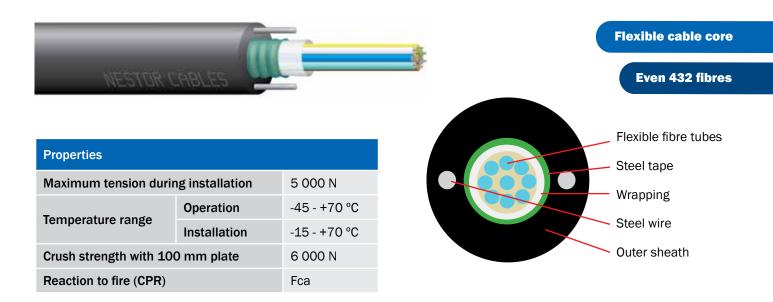

Construction					
Optical fibres	Coloured OM1 multi-mode fibres (GKL). (And single-mode fibres according to the ITU-T G.652.D in hybrid cables.)				
Secondary coating	A plastic core tube with jelly filling.				
Wrapping	The cable core is wrapped longitudinally with a swellable tape.				
Protection	Polymer coated corrugated steel tape applied longitudinally with an overlap. The nominal thickness of the steel tape is 0,15 mm.				
Strength members	Two 1,6 mm high tensile strength steel wires in the sheath.				
Outer sheath	The cable sheath consists of UV resistant black polyethylene compound (LDPE). Minimum sheath thickness is 1,5 mm.				
Sheath marking	Marking printed on the sheath at one meter interval: Name of manufacturer - cable type - lot number - year of manufacture - length marking.				

Cable size	Diameter	Weight	Minimum bending radius mm		Length	Durant
Cable Size	mm	kg/km	During installation	Installed	m	Drum

## FZVD2PMU Flex (OM3)

New direct buried fibre optic cable with improved durability and handling capabilities

Optical fibres	Coloured single-mode fibres according to the ITU-T G.652.D.
Secondary coating	Flexible colour coded fibre modules. Fibres are housed in thin walled tubes made of soft elastomeric material.
Wrapping	Water blocking tape.
Protection / Moisture barrier	Polymer coated corrugated steel tape applied longitudinally with an overlap. The nominal thickness of the steel tape is 0,15 mm.
Strength members	Two 1,6 mm high tensile strength steel wires in the sheath.
Outer sheath	UV resistant black polyethylene compound (HDPE). Nominal sheath thickness is 3,0 mm.
Sheath marking	Marking printed on the sheath at one meter interval: Nestor Cables - cable type - lot number - year of manufacture - length marking.

## **Submarine cables**

A submarine communications cable is a cable laid on the sea between land-based stations to carry telecommunication signals.

Modern "sea cables" are typically about 2,5 centimeters in diameter for the deep-sea sections, larger cables are used near shore. Optical fibre cables are anymore not only simple point-to-point connections, but multiple destinations can be served by a single cable system. Capacity has increased manyfold over the past years, reaching terabits per second overseas.

Nestor Cables can supply cables with a variety of fibre types and counts, and we have decided to present only a fraction of our growing product range in this brochure. However, we will modify and develop our products to fit your special requirements upon request.

## Joint closure NC-400W

On the basis of our classic joint closure NC-400, we have developed joint closure NC-400W especially to be used with our submarine cables to create solutions for under water installations.

FYOHBMP1,6MW
Optical fibre cable for underwater installation for lake and river crossings

Construction	
Optical fibres	Coloured single-mode fibres according to the ITU-T G.652.D.
Secondary coating	A plastic core tube with jelly filling.
Wrapping	The cable core is wrapped longitudinally with a swellable tape.
Moisture barrier	Polymer coated aluminium tape applied longitudinally with an overlap. The nominal thickness of the tape is 0,15 mm. Minimum overlap is 3 mm.
Inner sheath	UV resistant black polyethylene compound (LLDPE). Nominal sheath thickness is 1,0 mm
Armouring	Zinc-coated steel wires in single layer. Wire diameter is 1,6 mm.
Outer sheath	UV resistant black polyethylene compound (HDPE). Minimum sheath thickness is 2,5 mm.
Sheath marking	Marking printed on the sheath at one meter interval: Nestor Cables - cable type - lot number - year of manufacture - length marking

### Properties Maximum tension during installation 12 000 N Operation, storage, -45 - +60 °C Temperature transport range -15 - +60 °C Installation With 100 mm plate 10 000 N **Crush strength** With 25 mm mandrel 2 000 N

## FYOHBMP2,5JW also available

## **Color coding**

Nestor Cables uses following standard color systems:

- FIN2012
- ANSI/TIA (American National Standards Institute / Telecommunications Industry Association)
- DIN/VDE (Deutsches Institut für Normung e.V. / Verband der Elektrotechnik Elektronik Informationstechnik e.V.)

However, we can also customize color codings according to the customer's wishes.

<b>Fibre er</b>	Fin2012	ANSI/TIA 598-C	DIN/VDE 08888

12	Red RD	Aqua AQ	Pink PK			

## **Drum sizes**

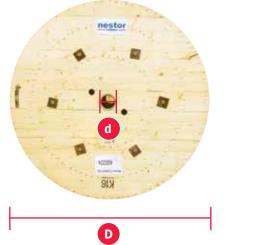

The measurements of standard cable drums are presented in the table below.

Wood is a natural material, and its weight can flunctuate for example because of humidity.

Please notice that the drum weights in the table are estimates, and the presented weights are possible only when the volume of wood mass is 420 kg/m<sup>3</sup> and the humidity of wood is 20%. If wood is dryer or wetter, it will also change the weight of the drum.

Measurements in millimetres, weight in kilograms

## **Regional sales offices, partners and agents**

Nestor Cables has a sales office in St. Petersburg, which manages sales for Russia, and we also have agents and partners in several countries (for example in Sweden & Norway, Romania, Ukraine and Algeria). You can find their contact information on our website or by contacting customer service.

## What Nestor Cables can offer you:

- Complete network solutions, including the needed cables and accessories: Nestor Cables has a wide range of products for different kind of customers, whether you are looking for a mere cable supplier or a complete network solution.
- Finnish tradition of producing high quality cable
- On-time deliveries
- Flexible lead times
- Customer oriented service
- Innovativeness
- Products suitable even for challenging circumstances

Nestor Cables' product range includes optical fibre cables, copper telecommunication cables, process control and automation cables for industries, fibre optic accessories and complete fibre optic cabling solutions for different needs (for example FTTH and FTTA solutions, fibre optic cabling concept for windmill farms and mobile optical cable units).

To learn more about our products and company, or to read news and announcements about our recent projects and presence at industry events, please visit our website.
